15	2.46	0.056
14	2.46	0.056
13	2.59	0.045
12	2.65	0.035

The Summit Peak is precision-crafted to create a unique shape unlike anything else in your bag. With the Centripetal HD packed inside the A.I. Core we've pushed the limits of RG and differential further than we ever have before. It was our Product Development team's goal to create a ball that instills confidence it will never miss the spot. The RG and differential combination ensures the Summit Peak revs up early and keeps shaping down lane, where it matters most. Because the early part of the lane gets beaten up the most, TX-23 Pearl makes sure the ball won't burn up too early. TX-23 is an improved formula derived from TX-16™ (Phaze™ II) that gives enhanced oil absorption for even better grip on those slick conditions. Feel free to adjust the surface for an even more potent response.
